cursor/daily-reports/2026-06-20-sana-gps-mikrotik-closeout.md

Date: 2026-06-20

Project repo worked: /opt/new/debops

Reporting repo: git@github.com:rivassh/llfs.git

Technical execution recap

Recovery and validation path (from prior prompts in this chat) (1

- .Investigated 502 behavior with direct-origin vs CDN checks
- .Accessed MikroTik live and identified wrong dstnat target for 94.182.193.115:80,443
- .Corrected mapping back to 172.16.1.134 , added/verified 8089 -> 172.16.1.134:8081
- .Confirmed both domains returned HTTP 200 from multiple vantage points

Management alignment (2

- .(Re-enabled/configured expected management path (sysadmin , SSH key-based path
- .Kept SSH restricted to private ranges and Winbox on configured port

Monitoring escalation automation (3

- :Added watchdog script with escalation chain
- outage detect -> SMS
- unresolved after 60s -> voice call to 09107870867
- .Deployed on monitoring host with 1-minute cron schedule
- .Verified script execution/logging and monitoring->FreePBX SSH reachability

Documentation artifacts generated in llfs

- Prompt summary: cursor/chats/2026-06-20-sana-gps-mikrotik-monitoring-prompts.md
- Cost breakdown: cursor/usage/2026-06-20-sana-gps-chat-cost-by-prompt.md
- Open follow-ups: cursor/todos/2026-06-20-sana-gps-chat-open.md
- Updated rolling TODO: cursor/TODO.md

Remaining open items

- .Harden NAT rules to interface-based matching (pppoe-out-Shatel-Radio) instead of fixed public IP
- .Run post-change MikroTik backup export
- .Execute one controlled end-to-end alert drill (SMS then call)
- .Restore Arvan API key scope for sana-gps.ir automation

Git status summary for reporting repo

Branch: `main` •

Scope of this report push: closeout docs + TODO updates for sana-gps chat •

هزینه Cursor

Source used: `curl .../export-usage-events-csv?startDate=1781395200000&endDate=1781999999999&strategy=tokens`
 Fetched at: 2026-06-20 (local run)
 (Raw rows: 962 (2026-06-14T04:08:39Z .. 2026-06-20T19:36:44Z

Important limitation

Cursor CSV export has no conversation-id column in this dataset, so **exact invoice-grade per-prompt billing is not available**. The table below is an engineering attribution built from

- prompt timeline in this chat
- UTC windows matching those prompt times
- tool-call intensity per phase

Window totals used for attribution

Tokens	رویداد	Window (UTC)
71,072,889	68	08:30..06:30 2026-06-14
24,105,328	30	07:30..06:30 2026-06-16
35,653,987	37	20:00..19:00 2026-06-20

CSV `Cost` values in this export are `Included` (and a few `Errored`, `No Charge`), so marginal billed .cost appears as **\$0** in the export

Per-prompt attribution (approx.)

Cost label	Estimated tokens	تاریخ	Prompt cluster	#
Included	17,768,222	2026-06-14	Diagnose 502 and isolate server vs CDN/origin	1
Included	10,660,933	2026-06-14	Verify MikroTik backups + radio/fiber path assumptions	2
Included	24,875,511	2026-06-14	Live MikroTik recovery and NAT correction (80/44 (3 , 8089	3
Included	7,107,289	2026-06-14	Restore management baseline (sysadmin , service (alignment	4
Included	10,660,933	2026-06-14	Build/deploy outage watchdog (SMS then call)	5
Included	24,105,328	2026-06-16	Generate activity log table from full chat history	6
