تاریخچه Git

پیام	کامیت	تاریخ
a log changes	e8d3564	2026-06-20

:Recent weekly context

پیام	کامیت	تاریخ
Add Cursor usage tracking workflow	ad9c15f	2026-06-19
Fix workspace hook installer and ignore archived /opt root files	e876ce5	2026-06-18
Initial devops: cursor prompt metrics and stage health	383f570	2026-06-18

Activity Log

Technical summary	موضوع	زمان	تاریخ
Confirmed monitoring-host URL for backup toggle page: <code>http://172.16.1.164:8090/backup-control.html</code>	Backup control URL	Outside office hours	2026-06-20
Fixed broken Persian text in <code>backup-control.html</code> and <code>audit.html</code> ; verified live pages no longer <code>.return ???</code>	Persian portal encoding	Outside office hours	2026-06-20
Added explicit <code>charset utf-8</code> to monitoring portal Nginx config and force-recreated <code>platform-monitoring-portal</code>	Nginx UTF-8 serving	Outside office hours	2026-06-20
Updated active watchdog/SMS scripts to send UTF-8 JSON payloads with <code>application/json; charset=utf-8</code>	Persian SMS encoding	Outside office hours	2026-06-20
Deployed corrected portal files and active SMS scripts to <code>172.16.1.164</code> ; verified HTTP response headers and page <code>.content</code>	Monitoring deployment	Outside office hours	2026-06-20
Produced a compact report of the UTF-8/encoding work	Daily report	Outside office hours	2026-06-20
Captured remaining TODOs, prompt lessons, cost report, and daily <code>.report</code> in <code>llfs</code>	Chat closeout	Outside office hours	2026-06-20

Verification

:Live verification after portal recreation

Result	URL
200 , text/html; charset=utf-8 , Persian title rendered correctly	http://172.16.1.164:8090/backup-control.html
200 , text/html; charset=utf-8 , Persian title rendered correctly	http://172.16.1.164:8090/audit.html

:Syntax checks passed for the edited scripts

- scripts/nextcloud/nextcloud-auth-watchdog.sh
- scripts/monitoring/infra-audit-collect.sh
- scripts/monitoring/sana-gps-availability-watchdog.sh
- scripts/monitoring/support-queue-unanswered-sms-alert.py

Current Open Work

- Old files that already contain literal ??? cannot be restored unless the original Persian source exists
- One controlled end-to-end SMS test is still recommended to prove that the Novin SMS path renders Persian correctly on the phone
- The debops working tree has unrelated ongoing changes; do not bulk-commit without splitting by topic and checking for secrets

هزینه Cursor

Workspace: /opt/new/debops

Primary chat transcript: 75045d56-a947-49a1-b7ac-5f006365f58a

Usage source: Cursor Dashboard CSV export, imported locally as ai/cursor-usage/imports/usage-events-2026-06-14-20.csv

Dashboard export window: 2026-06-14T00:00:00Z to 2026-06-20T23:59:59Z

Strategy: tokens

Security note: browser cookie/session tokens are intentionally excluded from this report

Executive Summary

The CSV contains 915 usage events for the account in the export window. The `Cost` column reports `Included` for 905 events and `Free` for 10 errored/no-charge events, so the marginal dollar cost visible in this export is `$0.00`. The practical cost driver was token volume: 809,713,176 total tokens across the account for the 7-day window.

The export does not include a conversation id, so exact per-prompt billing cannot be proven from the CSV alone. The safest attribution is

- Exact: account-level token usage by timestamp/model/event
- Approximate: prompt/topic cost attribution by matching prompt timestamps, hook logs, and work phases

Account Usage Totals

Cost column	Output tokens	Cache read	Input no-cache	توکن	رویداد	Scope
Included/Free	4,215,662	747,845,057	55,979,725	809,713,176	915	2026-06-20..14
Included	207,658	44,219,474	4,416,652	48,990,827	59	2026-06-20 only

Prompt/Topic Attribution

This is an engineering attribution, not a billing primitive. It maps user prompts to the main work phases and the closest available usage window

Cost evidence	Outcome	تاریخ	Prompt/topic
Covered by account-level CSV for 2026-06-16: 83,368,536 tokens	Identified monitoring URLs and SSH access; avoided exposing passwords	2026-06-16	Monitoring login details and dashboard links
Same daily bucket	Verified Vault dev mode and token login flow	2026-06-16	Vault login
Same daily bucket	Diagnosed Arvan origin mismatch; origin on 318 healthy	2026-06-16	guarantee.sana-gps.ir 502
Same daily bucket	Reworked health.html and deployed to monitoring portal	2026-06-16	Executive health dashboard
Account CSV for 2026-06-17: 58,315,239 tokens	Identified watchdog/cron source and disable path	2026-06-17	Nextcloud/LDAP SMS alert
Account CSV for 2026-06-19: 217,262,358 tokens	Documented internal Nexus setup and VPN-based external access	2026-06-19	Nexus internal and external usage

Cost-Control Lessons

- Long chats with many production rules and transcript history create very high cache-read volume
- Use a fresh chat or Ask mode for small explanatory questions
- Keep CSV exports in `ai/cursor-usage/imports/` and reuse them instead of repeatedly hitting the `.dashboard API`
- Avoid pasting browser cookies into chat; if pasted, rotate/logout the session afterward
